
Observation state / history / map
Action-conditioned rollout
Cost / risk / utility
Selected trajectory / action
Trajectory Evaluation
Planner
Candidate trajectories
World model
Predicted consequences
visual / BEV / occupancy / other queryable states
Reward/cost scorer
Select trajectory
World model as trajectory evaluator
Latent Policy Learning
Observations
Encoder
Latent state
Latent dynamics model
Latent rollout
Reward/value/policy
Selected action
World model as latent simulator
MPC-style Planning
Planner/controller
Candidate action sequences
Embedded world model
Candidate rollout + cost / constraint evaluation
Selected action sequence
Execute first action
new observation / replanning
World model as planner-embedded predictor
Increasing integration of world-model rollout into the decision module
