
World Models for Autonomous Driving
Future World Generation
(future-state generation)
Image / Video-based
BEV-based
Occupancy / 4D Scene-based
Point Cloud / LiDAR-based
Planning with World Models
(separable decision interface)
Trajectory Evaluation (separable rollout-to-score interface)
Latent Policy Learning (compact dynamics for policy learning)
MPC-style Planning
(candidate rollout, cost/constraint checks, and replanning)
Hybrid Prediction-Planning
(shared prediction–decision interface)
Unified Observation–Action Model
(shared sequence model / objective)
Shared Latent / Structured World State
(shared prediction–planning state / objective)
Interactive Closed-loop Simulator
(executed actions update the next world state)
Increasing prediction–decision integration
